

Client Responsibility

Exterior Painting Checklist

- All colors must be provided to our office prior to the start of the project. You can use the color schedule form on the website to submit colors easily.

- Exterior sprinkler systems must not be used while painting is in progress as water in work areas may leave surface (decks and/or house) too wet to prepare and/or paint. Sprinklers must be turned off 3-4 days before work starts, and left off during the duration of your paint project. If sprinklers are left on and cause a wet surface they may cause premature paint failure which will not be covered under warranty.

- Work areas must be accessible from 7:45 am until 4:45pm each day for work, Monday-Saturday.

- Please make arrangements to contain or remove any pets during your project.

- Exterior water supply should be turned on.

- Exterior Electrical outlets must be accessible.

- All shrubbery and trees to be pruned away from house and/or work area, by client, if necessary.

- If you are unable to perform any of the items on the checklist, please contact us and we will be happy to make arrangements with you.
